

Dr. Tiffany McCormack

McCormack Plastic Surgery
Reno, Nevada

ASK DR. McCORMACK

WHAT ABOUT YOUR CREDENTIALS HELPS MAKE YOU IN-TUNE WITH PATIENTS' BEAUTY GOALS?

As a Stanford-trained, board-certified cosmetic surgeon and a former Miss USA contestant, I combine my paramount training and keen eye for beauty to not only work on my patients, but with them—tailoring each procedure into a one-of-a-kind, individualized experience.

HOW DO YOU ENSURE PATIENT SATISFACTION?

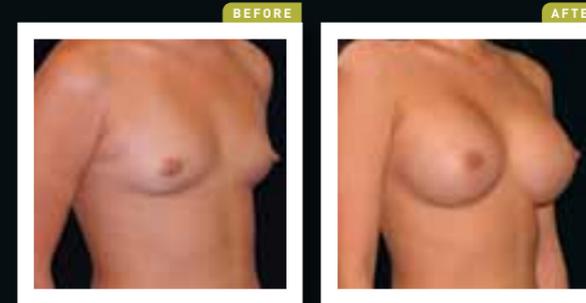

We follow through to ensure you are happy with the end result. And with a strong focus on educating patients, my goal is to inform patients, achieving a result that fits.

WHAT TECHNIQUES REDUCE FAT NONSURGICALLY?

We offer CoolSculpting™ by Zeltiq™, a nonsurgical technique cleared by the FDA that produces impressive results by reducing fat bulges and improving overall body contour. Zeltiq is performed in the office with no anesthesia and requires no downtime.

Beauty by design

As a full-service office, McCormack Plastic Surgery goes above and beyond to make sure full comprehensive treatment is available to each and every patient. With a focus on skin care and UV protection, Dr. McCormack offers the crème de la crème of personally tested skin-care products to keep patients glowing and healthy long after their procedures. As a state-of-the-art facility, McCormack Plastic Surgery offers the Portrait 3D™ surgical simulation system, which allows Dr. McCormack to showcase the likely outcome of a breast augmentation surgery, giving patients a visual image of what they can expect to look like after the procedure takes place. The simulated results can be viewed from all angles, and specific sizes of breast implants can be input into the computer so the patient can see results in a number of different scenarios.

OPTING FOR SILICONE

Choosing natural-looking silicone gel implants, over saline, Dr. McCormack performed a submuscular breast augmentation procedure, enhancing the size and projection of this 26-year-old's breasts. "I tend to recommend silicone because it mimics the look and feel of natural breast tissue. Many patients inquire about safety, and I always tell them that silicone, like saline, is FDA approved for breast augmentation."

AESTHETIC ABDOMENS

To correct this 32-year-old's protruding abdomen, which diet and exercise alone wouldn't fix after pregnancy, Dr. McCormack performed a tummy tuck as part of a mommy makeover. "Sometimes surgery is the best way to address symptoms that don't respond to other measures within a patient's control," says Dr. McCormack. "As shown here, a tummy tuck can offer major improvement, helping patients reach their aesthetic goals."

“a mommy makeover can be your answer post-pregnancy”
